

Transformation

1. The grid opposite shows triangle A .

Triangle A is transformed to triangle B by a reflection in the line with equation $x = 1$

(a) On the grid, draw and label triangle B .

Triangle B is transformed to triangle C under the translation $\begin{pmatrix} 7 \\ -3 \end{pmatrix}$

(b) On the grid, draw and label triangle C .

Triangle C is transformed to triangle D under the transformation with matrix \mathbf{M} where

$$\mathbf{M} = \begin{pmatrix} 2 & 0 \\ 0 & -2 \end{pmatrix}$$

(c) On the grid, draw and label triangle D .

(d) Describe fully the **single** transformation that maps triangle A onto triangle D .

$$\begin{aligned} c) \quad C_1 &= (-2, 1) \\ C_2 &= (2, 1) \\ C_3 &= (-1, 3) \end{aligned}$$

$$\begin{aligned} C_1 &= (4, -2) \\ C_3 &= (-2, -6) \end{aligned}$$

$$\begin{pmatrix} x' \\ y' \end{pmatrix} = \begin{pmatrix} 2 & 0 \\ 0 & -2 \end{pmatrix} \begin{pmatrix} x \\ y \end{pmatrix}$$

$$\begin{aligned} x' &= 2x \\ y' &= -2y \end{aligned}$$

$$\begin{aligned} C_1 \quad x' &= -2 \times 2 = -4 \\ y' &= 1 \times -2 = -2 \\ &(-4, -2) \end{aligned}$$

d) Enlargement
SF = 2
centre = (6, 2)

2. On the grid opposite, trapezium B is the image of trapezium A under a single transformation.

(a) Describe fully the single transformation.

Trapezium C is the image of trapezium A under a reflection in the line with equation $x = -1$

(b) On the grid opposite, draw and label trapezium C .

Trapezium A is transformed to trapezium D under the transformation with matrix \mathbf{M} where

$$\mathbf{M} = \begin{pmatrix} -2 & 0 \\ 0 & -1 \end{pmatrix}$$

(c) On the grid opposite, draw and label trapezium D .

Trapezium D is transformed to trapezium B under the transformation with matrix \mathbf{N} .

(d) Find matrix \mathbf{N} .

a) Enlargement, SF: 2, centre (0,0)

c) $A = (2, 1) (2, 3) (1, 2) (1, 3)$

$D = (-4, -1) (-4, -3) (-2, -2) (-2, -3)$

d) $B = (4, 2) (4, 6) (2, 4) (2, 6)$

$$\mathbf{N} = \begin{pmatrix} -1 & 0 \\ 0 & -2 \end{pmatrix}$$

Turn over for a spare grid if you need to redraw your trapeziums.

The Maths Society

3. Triangle A is drawn on the grid opposite.

Triangle A is reflected in the line with equation $x = -1$ to give triangle B .

(a) On the grid, draw and label triangle B .

Triangle A is transformed to triangle C under a rotation of 90° clockwise about the point with coordinates $(1, 0)$

(b) On the grid, draw and label triangle C .

Triangle B is transformed to triangle D under the translation $\begin{pmatrix} 2 \\ -5 \end{pmatrix}$

(c) On the grid, draw and label triangle D .

Triangle A is transformed to triangle E under the transformation with matrix \mathbf{M} where

$$\mathbf{M} = \begin{pmatrix} 1 & 0 \\ 0 & -1 \end{pmatrix}$$

(d) On the grid, draw and label triangle E .

Triangle E is the image of triangle C under a **single** transformation.

(e) Describe fully this transformation.

$$A = (1, 3)(2, 1)(3, 4)$$

$$E = (1, -3)(2, -1)(3, -4)$$

e) reflection
 $x + y = 1$

4. Triangles A and D are drawn on the grid below.
 Triangle B is the image of triangle A under a reflection in the line with equation $y = -x$

(a) On the grid below, draw and label triangle B .

Triangle A is transformed to triangle C under the translation $\begin{pmatrix} -9 \\ -2 \end{pmatrix}$

(b) On the grid, draw and label triangle C .

(c) Describe fully the **single** transformation that maps triangle A onto triangle D .

enlargement
 $SF = -0.5$
 centre = $(6, -1)$

A spare grid is on the next page if you need to redraw your triangles.

The Maths Society

5.

Triangles A , B , C and D are drawn on the grid above.

Describe fully the single transformation that maps

(a) triangle A onto triangle B **reflection at $y = -2$**

(b) triangle A onto triangle C **translation $\begin{pmatrix} -5 \\ 2 \end{pmatrix}$**

(c) triangle A onto triangle D **rotation 90° anticlockwise at $(2, -1)$**

Triangle E is the image of triangle A under an enlargement with scale factor -2 and centre of enlargement $(4, 0)$

(d) On the grid, draw and label triangle E

6. Trapeziums P and Q are drawn on the grid opposite.

(a) Describe fully the single transformation that maps trapezium P onto trapezium Q

Trapezium P is transformed to trapezium A under the translation $\begin{pmatrix} 2 \\ -3 \end{pmatrix}$

Enlargement
SF = 2
centre (6, -2)

(b) On the grid, draw and label trapezium A

Trapezium P is transformed to trapezium B by a rotation of 90° clockwise about the point (5, 2)

(c) On the grid, draw and label trapezium B

Trapezium C is the image of trapezium Q under the transformation with matrix \mathbf{M} where

$$\mathbf{M} = \begin{pmatrix} 0 & -\frac{1}{2} \\ \frac{1}{2} & 0 \end{pmatrix}$$

(d) On the grid, draw and label trapezium C

$$Q = (-4, 4)(4, 4)(0, 6)(-2, 6)$$

$$C = (-2, -2)(-2, 2)(-3, 0)(-3, -1)$$

The Maths Society

7.

Quadrilateral *A* and quadrilateral *B* are drawn on a grid.

Quadrilateral *B* is the **image** of quadrilateral *A* under a single transformation.

Describe fully this single transformation.
